

Trust is important – service is invaluable.

More than 12 years' experience in photovoltaics and technical plant management of installations with a total capacity exceeding 30 MWp enables us to guarantee top-quality service for plants of any size – from individual commercial roofs through to megawatt solar farms. Our customized plant management is tailored to your needs, ensuring you gain the optimum power yield from your PV plant.

Your benefits: safeguarding plant yields

- **Ease:** one dedicated contact
- **Reliability:** rapid response as and when required
- **Peace of mind:** continuous yield protection for your investment
- **Transparency:** customer access to the SunEnergy portal

Monitoring: overview and documentation

- daily analysis and evaluation of yield data
- continuous monitoring and regular reports on the plant's operational status
- provision of documentation on energy yields and on-site consumption
- I-V curve measurements and all customary measuring methods
- validity check of current yield and weather data
- rapid and reliable service
- personal customer access to SunEnergy monitoring via the portal

Downtime management: information, consultation, rectification

- identification of faults
- immediate action to rectify faults
- coordination and performance of repair work
- daily reports on faults that affect yields
- creation of event-oriented reports

Maintenance and servicing – tailored to you

- inspection and maintenance of system components based on faults identified
- modern measuring techniques for the accurate and efficient analysis of individual components
- use of all customary testing and measuring methods
- manufacturer-independent analyses

Safeguarding yields: additional services for PV

- load management (feed-in management) and calculation of yield losses
- yield and performance analysis (PR)
- plant testing and due diligence reports
- cleanliness assessment and any necessary cleaning
- grounds maintenance, safety concepts and more
